The Xometry Customer Service Agreement (www.xometry.com/service-agreement), Manufacturing Standards (www.xometry.com/manufacturing-standards), and website Terms of Use (www.xometry.com/terms) (collectively the "Terms") are incorporated by reference into this Quote, and such Terms shall exclusively govern any order which results from this Quote unless the parties have negotiated and signed a master agreement ("MSA") that would, by its terms, govern the order. You may use your standard business forms, including purchase orders, to order from Xometry, but use of such forms is for your convenience only and does not alter the Terms. XOMETRY WILL NOT BE BOUND BY, AND SPECIFICALLY OBJECTS TO, ANY TERMS OR CONDITIONS THAT ARE DIFFERENT FROM, INCONSISTENT WITH, OR IN ADDITION TO THE TERMS OR AN MSA, as applicable, whether contained in Your forms or otherwise presented by You at any time. Any such terms and conditions are hereby rejected, excluded, and inapplicable, unless agreed to in writing and signed by an authorized representative of Xometry.

- PLEASE REVIEW THIS QUOTE FOR ACCURACY PRIOR TO ORDER -

We have priced and estimated a delivery window for your job based on the geometry in 3D model you have provided, along with the tolerances, features and secondary operations you have selected during the submission process and which are specifically confirmed by us in this Quote. We do not automatically extract features, tolerances or other non-geometric information from your submitted 3D model, even if represented there (e.g. threads, tapped holes, etc.). Even though our prices are dynamically generated in real time, we will honor the price in this Quote for thirty (30) days from generation (although the estimated delivery window will be re-calculated at time of actual order placement).

On-site Source Inspection requirements may add an additional charge and increase lead time.

While we may provide you with design for manufacturing assistance, you are ultimately responsible for the suitability of your design, and associated material selection, for any intended purpose. You may submit one or more engineered drawings and or specification sheets to us. While we will do our best to identify any inconsistencies or conflicts in your materials prior to manufacturing your part, you alone are responsible for any inconsistencies between the materials you provide to us and what is reflected in this Quote.
